Attempt : 1
Total Mark : 40
Marks Obtained : 40

Section 1 : Coding

1. Problem Statement

Meera is practicing her English vocabulary. She wants to focus on words that have more vowels in them, as they help improve her pronunciation. She decides to extract only those words from a sentence that contain at least two vowels.

Your task is to help Meera by writing a program that finds such words from the given sentence.

Input Format

The input contains a string representing the sentence.

Output Format

The output prints all the words that contain at least two vowels, separated by a space.

If no such word exists, print "No words with two vowels".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: This is an example sentence

Output: example sentence

Answer

```
import java.util.*;
class Main{
    public static void main(String args[]){
        Scanner s = new Scanner(System.in);
        String[] a=s.nextLine().split(" ");
        boolean e=true;
        for(String b:a){
            String f=b.toLowerCase();
            int d=0;
            for(char c:f.toCharArray()){
                if(c=='a'||c=='e'||c=='i'||c=='o'||c=='u') d++;
            }
            if(d>=2){ System.out.print(b+" "); e=false;}
        }
        if(e) System.out.println("No words with two vowels");
    }
}
```

Status : Correct

Marks : 10/10

2. Problem Statement

In a college, students are required to create unique usernames for accessing the digital library.

The librarian needs your help to verify whether the usernames entered by students are valid.

A username is considered valid if:

It contains only letters (a–z, A–Z) and digits (0–9). Its length is between 5 and 15 characters (inclusive). It must start with a letter (not a digit).

Your task is to determine whether each username in the list is valid or not.

Input Format

The first line of input contains an integer T, representing the number of usernames to check.

The next T lines each contain a string S, representing a username.

Output Format

For each username S, the output print "YES" if it is valid.

Otherwise, the output print "NO".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1

Alice123

Output: YES

Answer

```
import java.util.*;
class Main {
    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        int T = Integer.parseInt(s.nextLine());
        for (int i = 0; i < T; i++) {
            String str = s.nextLine();
            if (str.matches("[A-Za-z][A-Za-z0-9]{4,14}$")) {
                System.out.println("YES");
            } else {
                System.out.println("NO");
            }
        }
    }
}
```

Status : Correct

Marks : 10/10

3. Problem Statement

A bookstore wants to analyze the titles of books to determine their longest word in each title. This helps in designing banners and covers.

Your task is to write a program that, given a sentence (book title), finds and prints the longest word. If multiple words have the same maximum length, print the first one.

Input Format

The input contains a single line containing a sentence representing the book title.

Output Format

The output prints a string representing the longest word in the sentence (book title).

Refer to the sample output for formatting specifications.

Sample Test Case

Input: The Chronicles of Narnia

Output: Chronicles

Answer

```
import java.util.*;
class Main{
    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        String[] a = s.nextLine().split(" ");
        String l = "";
        for (String b : a) {
```

```
        if (b.length() > l.length()) l = b;
    }
    System.out.println(l);
}
}
```

Status : Correct

Marks : 10/10

4. Problem Statement

Anjali is preparing a report on text complexity. She wants to identify all words in a sentence that contain at least one digit so she can analyze numeric mentions.

Your task is to write a program that extracts and prints all words containing at least one digit from a given sentence.

If no such word exists, print "No words with digits found".

Input Format

The input contains a single line containing a sentence with multiple words.

Output Format

The output prints all words containing at least one digit separated by a space.

If no word contains a digit, print "No words with digits found".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: The model X100 and Y200 are available

Output: X100 Y200

Answer

```
import java.util.*;
class Main{
```

```
public static void main(String[] args) {
    Scanner sc = new Scanner(System.in);
    String sentence = sc.nextLine();
    String[] words = sentence.split(" ");
    String result = "";
    for (String word : words) {
        if (containsDigit(word)) {
            result += word + " ";
        }
    }
    if (result.equals("")) {
        System.out.println("No words with digits found");
    } else {
        System.out.println(result.trim());
    }
}

private static boolean containsDigit(String word) {
    for (int i = 0; i < word.length(); i++) {
        if (Character.isDigit(word.charAt(i))) return true;
    }
    return false;
}
```
